1. Introduction

RIN is a token designed to support holders of the Hashflops Collection NFTs.

2. Getting Started

RIN, the exclusive token for Hashflops NFT holders, will be distributed on 11 eclipse days, from the annular eclipse on October 2, 2024 (GMT), to the hybrid eclipse on November 14, 2031 (GMT).

3. What is RIN?

RIN represents a new expression in Web3 through art, gaming, and entertainment, designed exclusively for Hashflops NFT holders. Controlled and developed by ICEI (Ice Computer Enterprise Inc.), this token is distributed solely to these holders.

4. RIN Allocation

RIN is an ERC-20 token created on the Ethereum network. The total supply of RIN is permanently fixed at 21 million tokens, mirroring Bitcoin's supply, including the decimal specification. All tokens are distributed exclusively to Hashflops collection holders, with no allocation to developers. All tokens are locked until the distribution date. A snapshot of holders will be taken at Greenwich Mean Time (GMT 00:00) before each distribution. The distribution amount is allocated according to the number of holders and halves at each stage. The contract interface does not expose minting or burning functionality, ensuring the total supply will never increase or decrease.

5. Distribution Roadmap for Hashflops Collection Holders

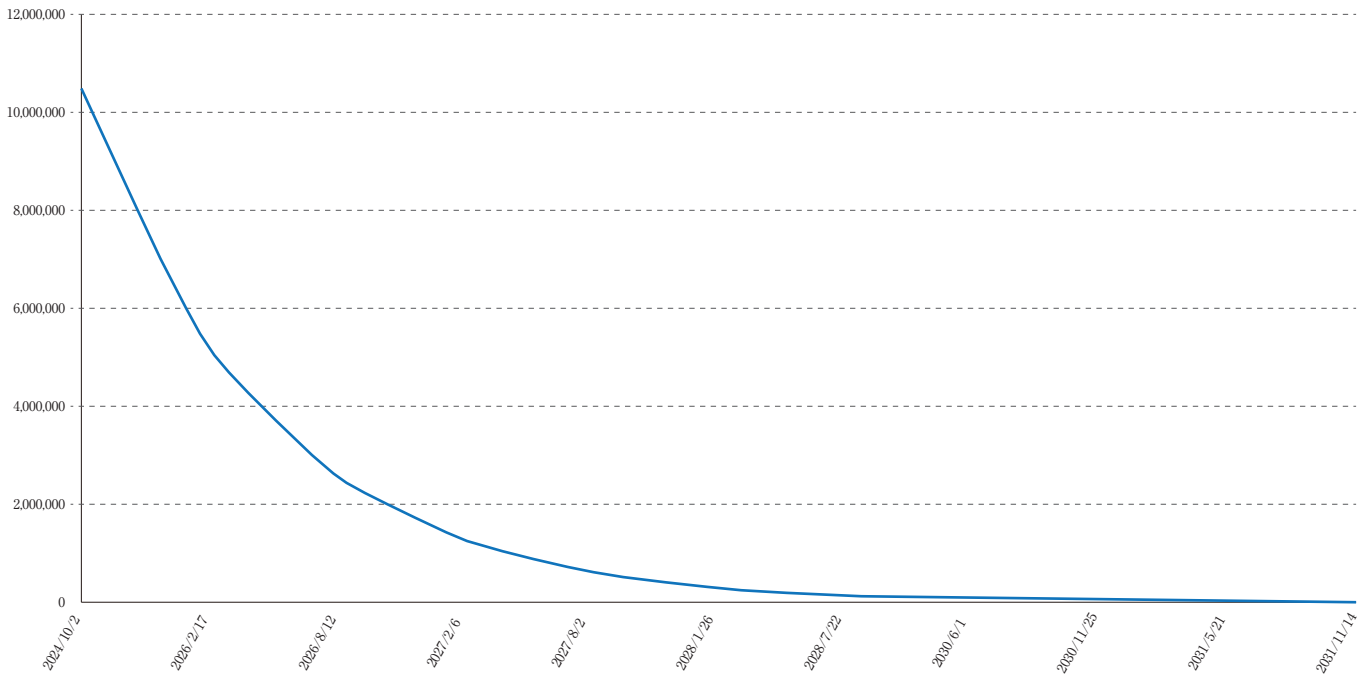

Blockchain verification for these events can be confirmed through the links provided on the respective event days.
